

# Young workers with low employment skills: Their perceptions of work, decent work and the future - preliminary results

**International scientific seminar - UNITWIN International Network  
University of Lausanne, March 5-6, 2020**

Dr. Gudbjörg Vilhjálmisdóttir, professor - GUGGA  
University of Iceland

# Contents

- Definition of low skilled workers and context
- Theoretical framework:
  - Blustein PWT - Psychology of Working theory
  - Savickas CCT – Career Construction Theory
  - Arnett – Emerging adulthood / Bauman – Liquid Modernity
  - Social justice
- Research questions
- Method
- Results
- Discussion

# What are low-skilled workers?

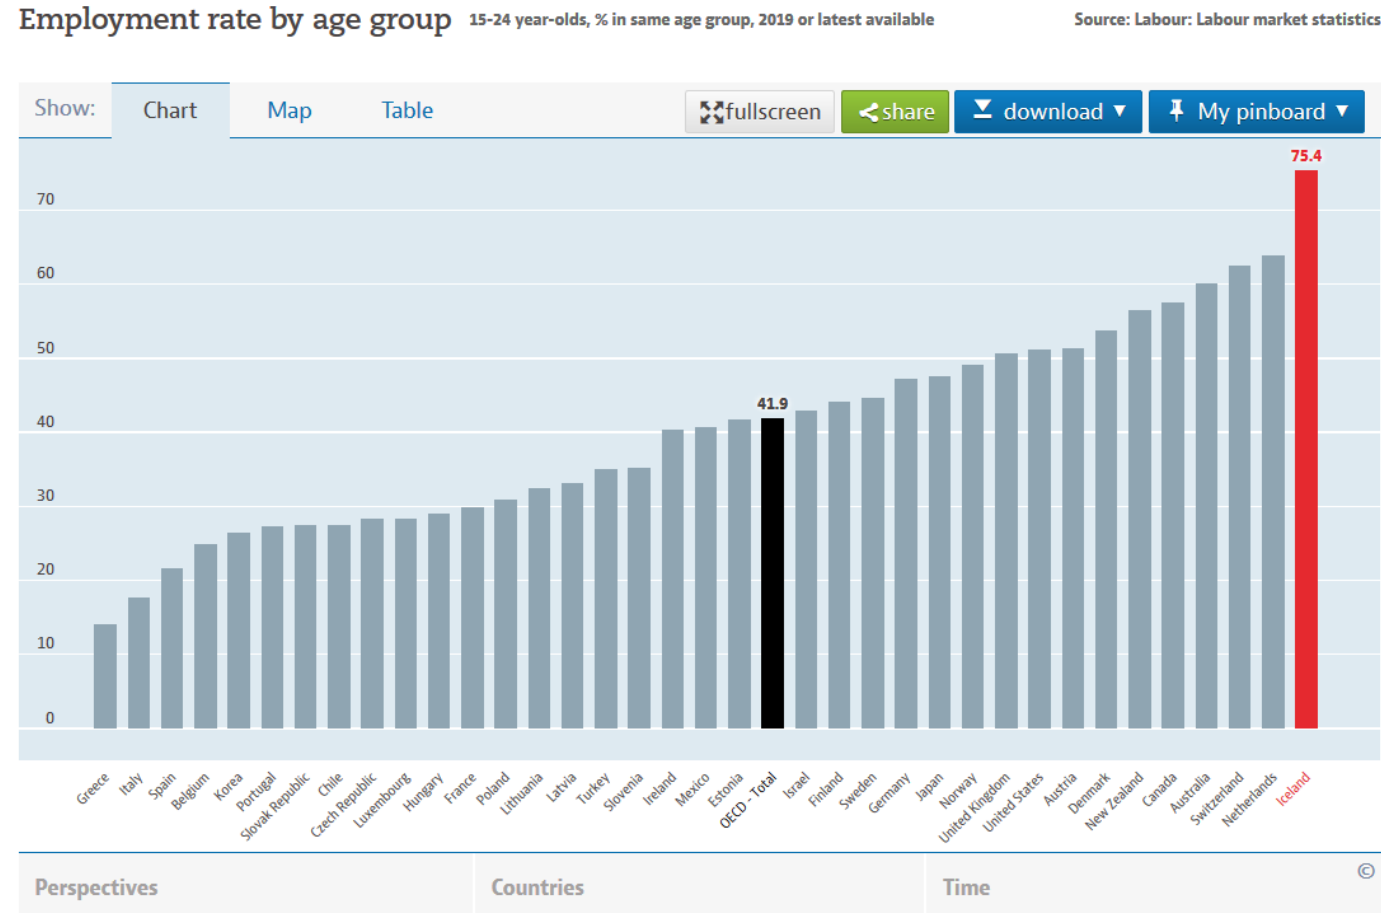

- No formal education after compulsory education
- Minimal economical gains for the work performed
- Limited occupational choices
- Limited work experience
- Sometimes skills in low-skilled jobs can be learned quickly (within 30 days)

• [Investopedia.com](https://www.investopedia.com)

# Context: High employment and drop out rate

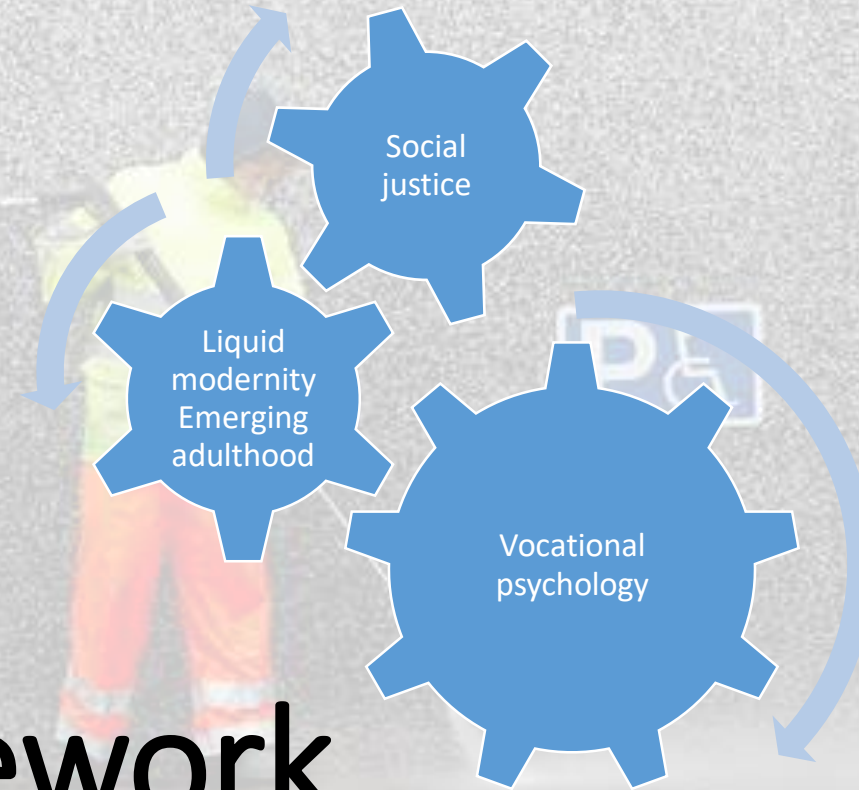

- High employment rate - 75% of people aged 15 to 24
  - Part time jobs
  - Formal work (90% in unions)
- Low unemployment rate, 6.7%, in youngest age groups (16-24 ys)
  - (Eurostat, 2019)
- High dropout rate from upper secondary school – 26% of a cohort
  - (Statistics Iceland, 2018)

OECD (2020), Employment rate by age group (indicator).  
doi: 10.1787/084f32c7-en (Accessed on 18 February 2020)

# Theoretical framework

# Theoretical framework

# Theoretical framework of research: Right to dignified work / Career adaptability

## Dr. David Blustein's Psychology of Working Theory (PWT)

- A theory that focuses on how hard work is for many in our society (Blustein, 2019)
- „Dignified work is not just important for survival but is also essential for individual and community well being (Blustein, 2019)“.

## Dr. Mark Savickas' Career Construction Theory (CCT)

- „From career construction, what we keep focusing on to help people design life are two meta-competencies, identity and adaptability. Identity means helping people know their intentions and their story to shape their choice. And adaptability knowing how to revise the story when the time comes“.

(Interview Jenn Long with dr. Mark Savickas, in Integrating theory, research & practice in c.d.(n.d. www.ncda.org)

Career Adapt-Abilities Scale: Items, Standardized Loadings, Descriptive Statistics, and Internal Consistency Reliabilities.

Construct	Item (First-Order Indicators)	Mean	SD	Loading
Concern	1. Thinking about what my future will be like	3.83	.92	.61
	2. Realizing that today's choices shape my future	3.86	.97	.62
	3. Preparing for the future	3.61	.95	.79
	4. Becoming aware of the educational and career choices that I must make	3.95	.96	.75
	5. Planning how to achieve my goals	3.63	1.02	.73
	6. Concerned about my career	3.83	1.11	.43
Control	1. Keeping upbeat	3.48	.95	.51
	2. Making decisions by myself	3.87	.93	.59
	3. Taking responsibility for my actions	4.00	.88	.65
	4. Sticking up for my beliefs	4.19	.86	.61
	5. Counting on myself	4.01	.91	.73
	6. Doing what's right for me	4.00	.94	.73
Curiosity	1. Exploring my surroundings	3.58	.93	.66
	2. Looking for opportunities to grow as a person	3.89	.86	.80
	3. Investigating options before making a choice	3.74	.95	.70
	4. Observing different ways of doing things	3.77	.92	.71
	5. Probing deeply into questions I have	3.36	1.09	.63
	6. Becoming curious about new opportunities	3.81	.90	.64
Confidence	1. Performing tasks efficiently	3.91	.87	.74
	2. Taking care to do things well	3.91	.88	.83
	3. Learning new skills	4.02	.87	.79
	4. Working up to my ability	3.87	.95	.76
	5. Overcoming obstacles	3.96	.89	.76
	6. Solving problems	3.92	.94	.72
Construct	Construct (Second-Order Indicators)	Mean	SD	Loading
Adaptability	1. Concern	3.79	.71	.85
	2. Control	3.93	.85	.89
	3. Curiosity	3.69	.71	.85
	4. Confidence	3.93	.73	.91

\*Note: All of the loadings are statistically significant at  $\alpha = 0.01$

# Savickas' Career Construction Theory

## Career identity

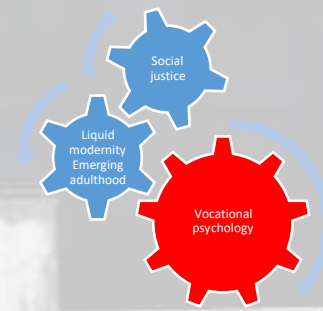

- Young people construe work identities → migrate into work that gives them satisfaction / P-E
- Individuals need to repeatedly reconstruct their identities, which are viewed as performances rather than as ascribed traits.
  - Savickas, 2015, p. 137
- If you can dream it, you can do it
  - Savickas, 2011

## Career adaptability

- „Career adaptability is a psycho-social construct that denotes an individual's readiness and resources for coping with current and anticipated tasks of vocational development. The adaptive fitness of attitudes, beliefs, and competencies – the ABC's of career construction – increases along the developmental lines of concern, control, [curiosity] and confidence“
  - Savickas, 2005, p. 46

# Career adaptability dimensions

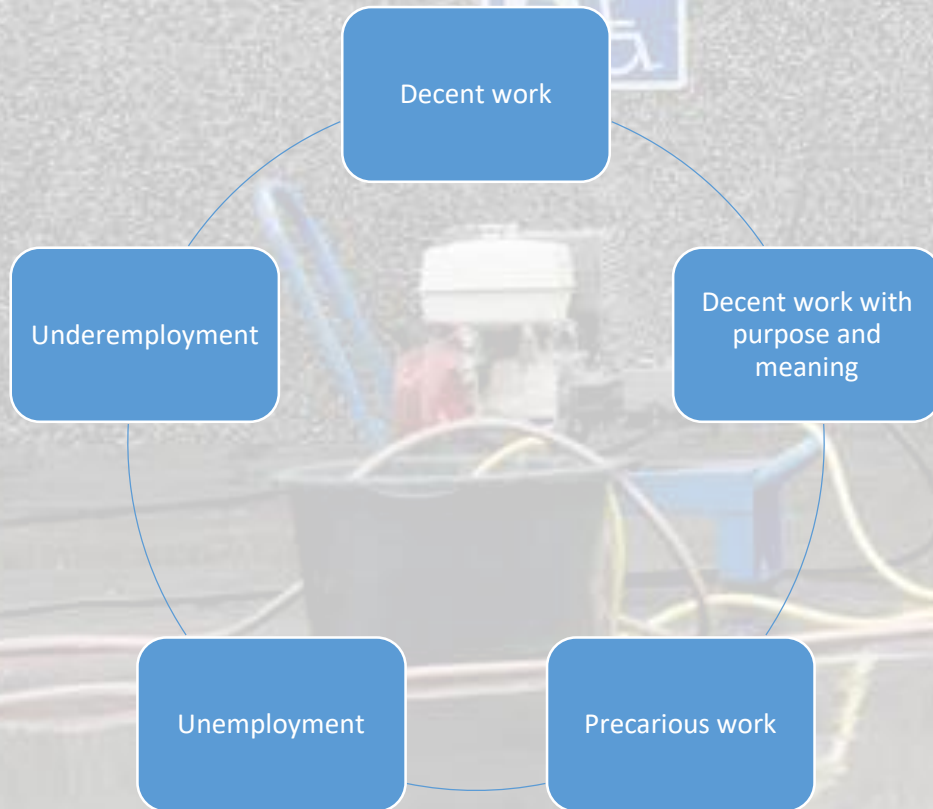

Adaptability dimension	Attitudes and beliefs	Competence	Coping behaviours	Career problem
<b>Concern</b>	Planful	Planning	Aware Involved Preparing	Indifference
<b>Control</b>	Decisive	Decision making	Assertive Disciplined Wilful	Indecision
<b>Curiosity</b>	Inquisitive	Exploring	Experimenting Risk taking Inquiring	Unrealism
<b>Confidence</b>	Efficacious	Problem solving	Persistent Striving Industrious	Inhibition

Source: Savickas, 2005

# Blustein's Psychology of working theory

## Broad landscape of contemporary work

Adapted from Blustein, 2019

## Haves and have-nots

- Job polarization is increasing
- Majority of at-risk workers are low skilled and have low income  
→ precariat
  - (Blustein, 2019)
- Blustein's theory addresses work experiences of at-risk workers
  - No focus on lower skilled workers in career psychology literature, but they deserve more attention
    - (Blustein, 2011; Muse & Pichler, 2011)

# Psychology of Working Theory

## Work volition

- is the “perceived capacity to make occupational choices despite constraints”
  - (Duffy et al, 2012, p. 401 )
- Work experiences range from „people with volition in their work lifes to those that work in any task simply to survive for another day“
  - (Blustein, 2006, p. 21)

## Working fulfils three core functions

1. Working as a means for survival and power
  2. Working as a means of social connection
  3. Working as a means of self-determination
- ➔ Work can be a source of injustice or it can fill life with purpose

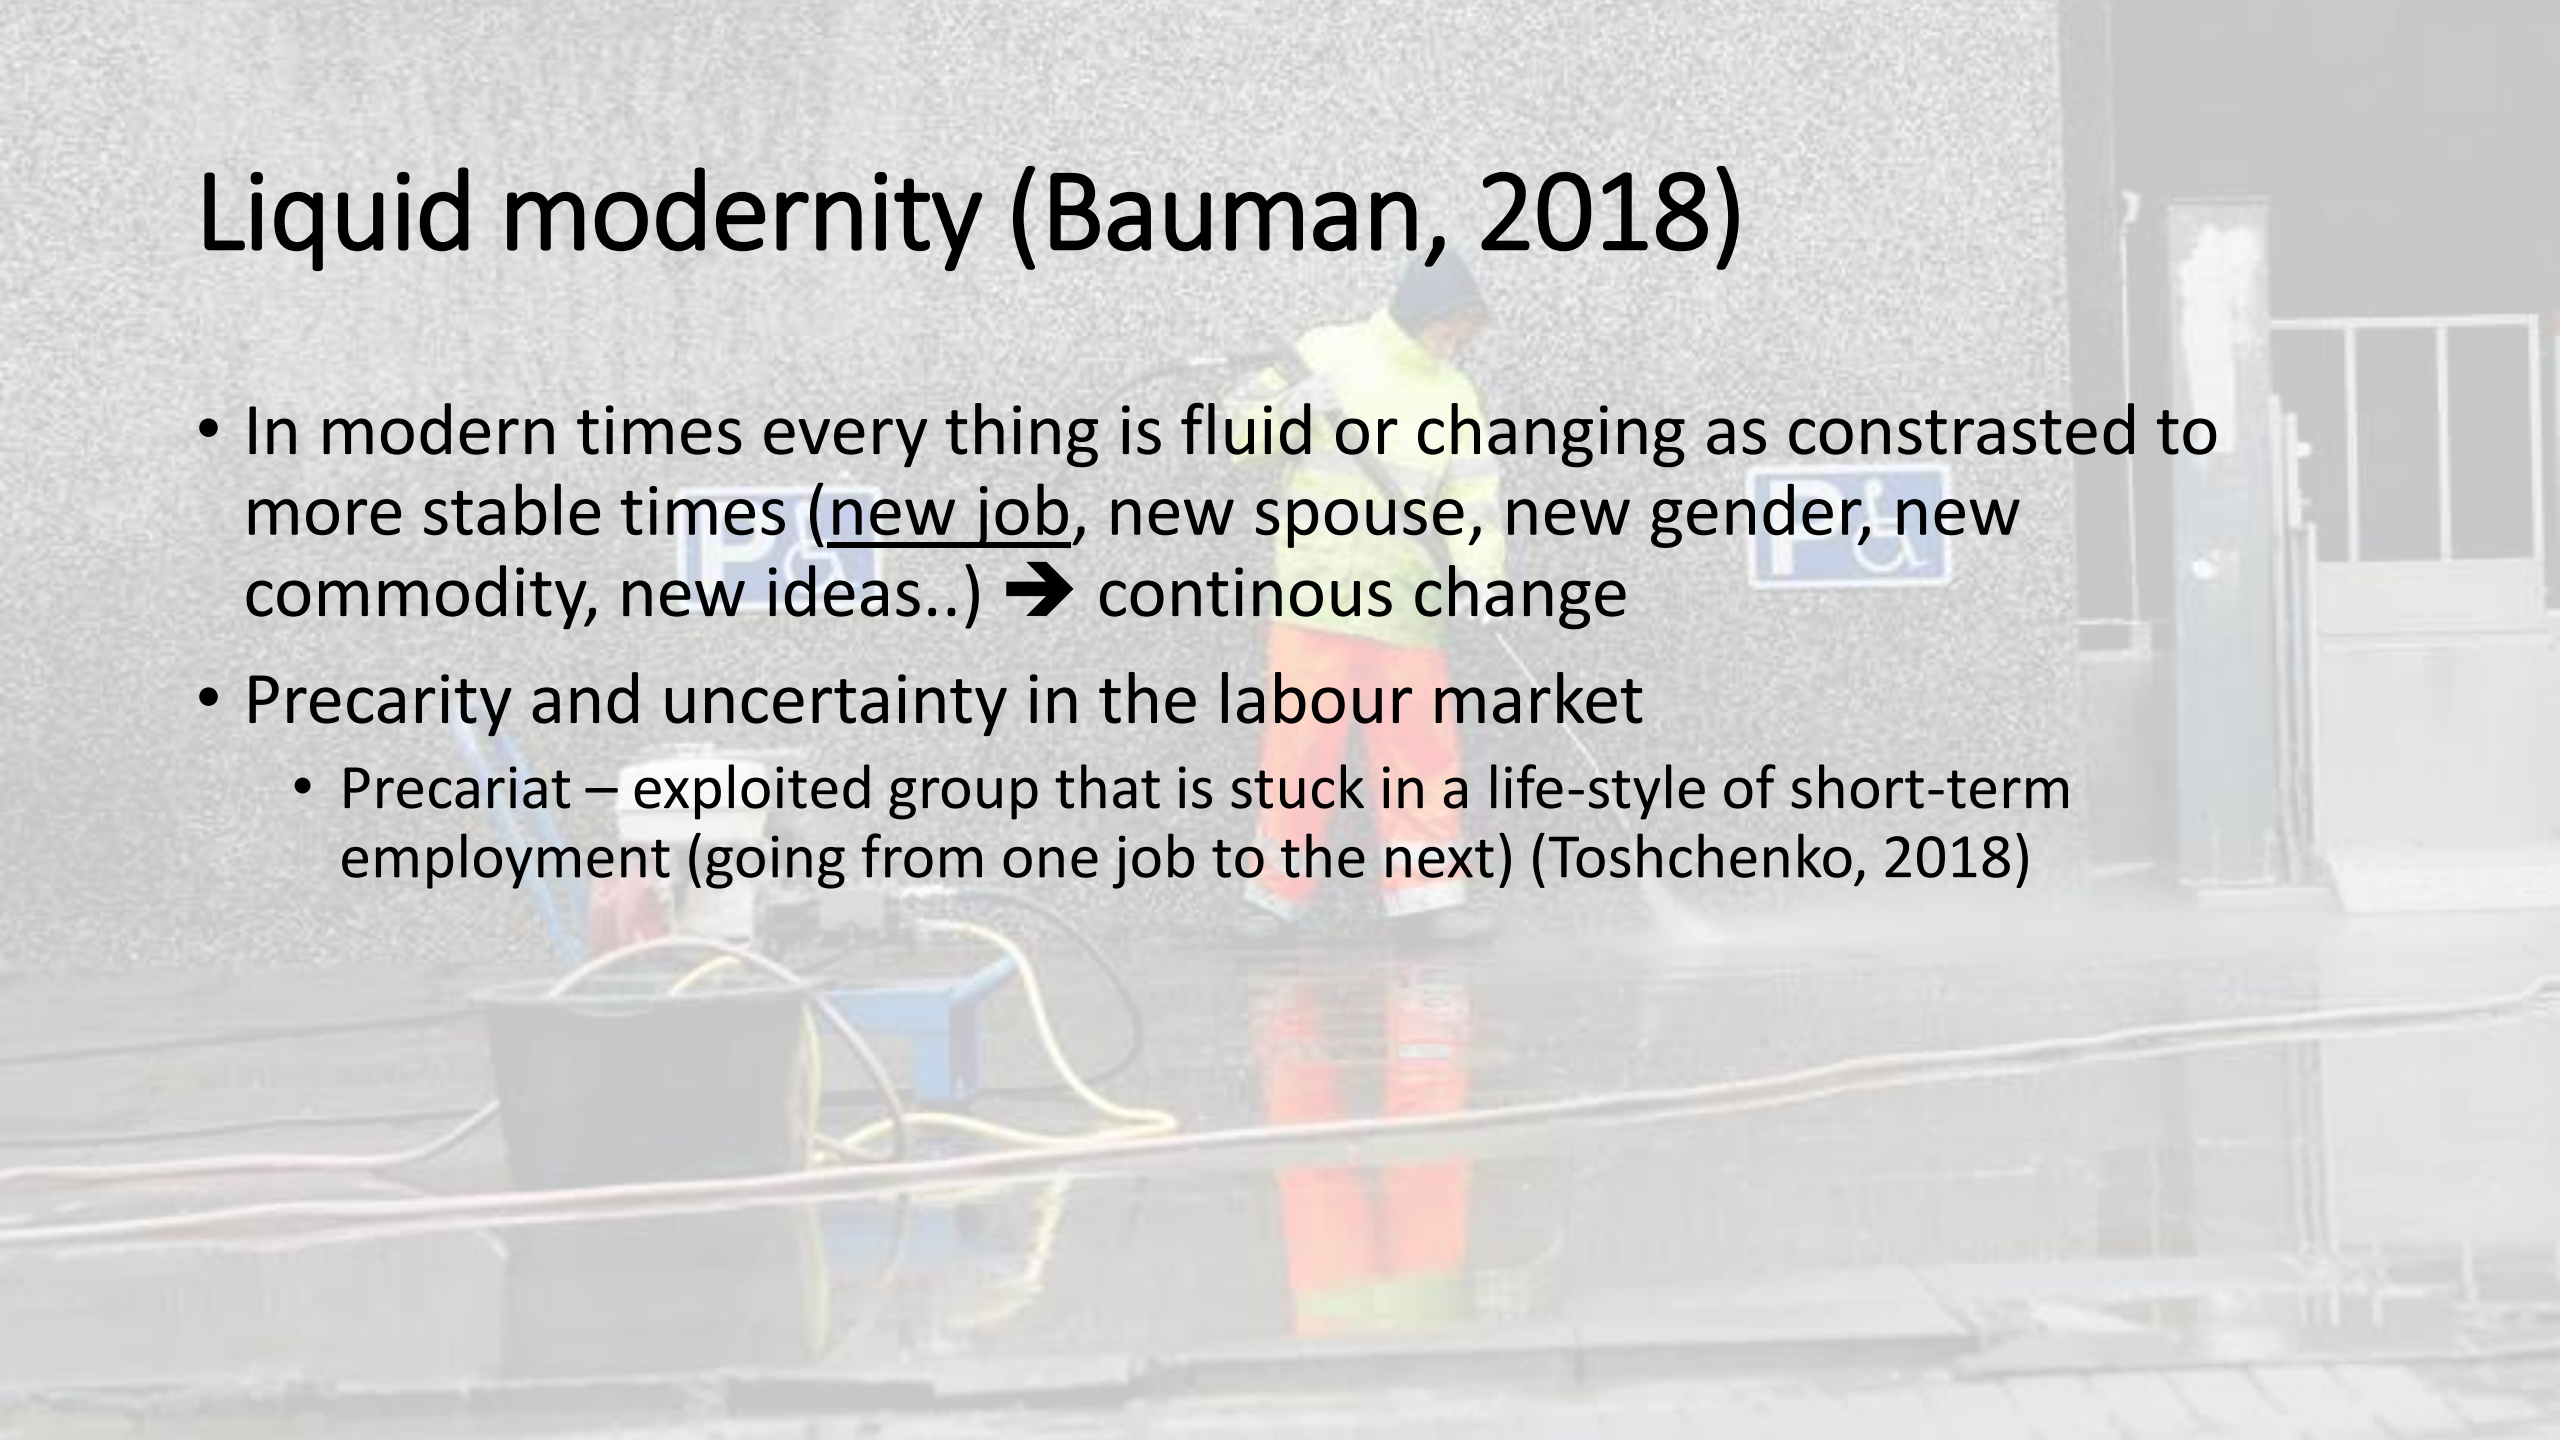

# Theoretical framework

# Liquid modernity (Bauman, 2018)

- In modern times every thing is fluid or changing as constricted to more stable times (new job, new spouse, new gender, new commodity, new ideas..) → continuous change
- Precarity and uncertainty in the labour market
  - Precariat – exploited group that is stuck in a life-style of short-term employment (going from one job to the next) (Toshchenko, 2018)

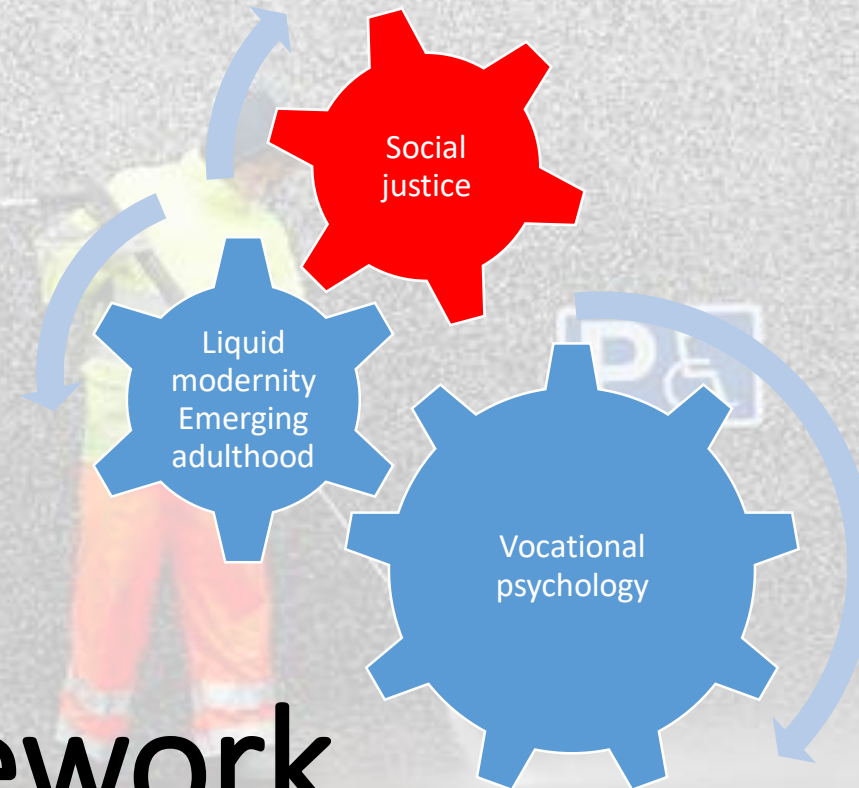

# Emerging adulthood

- The age group 18-29 is in-between adolescence and adulthood (Arnett, 2004)
- Identity exploration, focusing on oneself and feeling of being in-between are main characteristics of this period (Arnett, 2010)
  - In-between different kind of work in search for identity
- Transition from school to work

# Theoretical framework

# Decent work ≠ unemployment

## Definition of decent work

*Opportunities* for work that is *productive* and delivers a *fair income, security* in the workplace and *social protection* for families, better prospects for *personal development* and *social integration, freedom* for people to *express* their concerns, organize and *participate* in the decisions that affect their lives and *equality* of opportunity and treatment for all women and men

International Labour Organization, n.d

## Research on decent work

- Extensive research has demonstrated that decent work is associated with greater resilience in other domains of life and with an enhanced level of health and well-being.
  - Blustein, Masdonati, Rossier, 2017
- Access to decent work is more difficult for marginalized people
  - Duffy et al, 2016

# Research questions

For young people without formal training, but in a job:

- What are their views on the job they are currently in (and have been for the last 6 months)?
- What are their views on their future careers?
- Do they consider their job as decent work?
- What are their educational intentions?
- How does their work experience contribute to career construction?
  - How do they differ according to social variables (SES, gender, parenthood), psychological variables (work volitions) or psychosocial variables (career adaptability)

# Method

- Quantitative: Questionnaire (60 questions) administered in January and February 2020 to 7000 participants (random sampling) in the age group of 20 to 29. Number of participants 141, 65% men and 35% women. SES of both parents upper class or middle class (45%), low class, upper or middle class (55%).
- Questions on background, work situation, salary, attitudes towards their jobs, future intentions, work volition, decent work, preferred occupation, education in past, present and future, leisures and finally Career Adapt-Ability Scale.

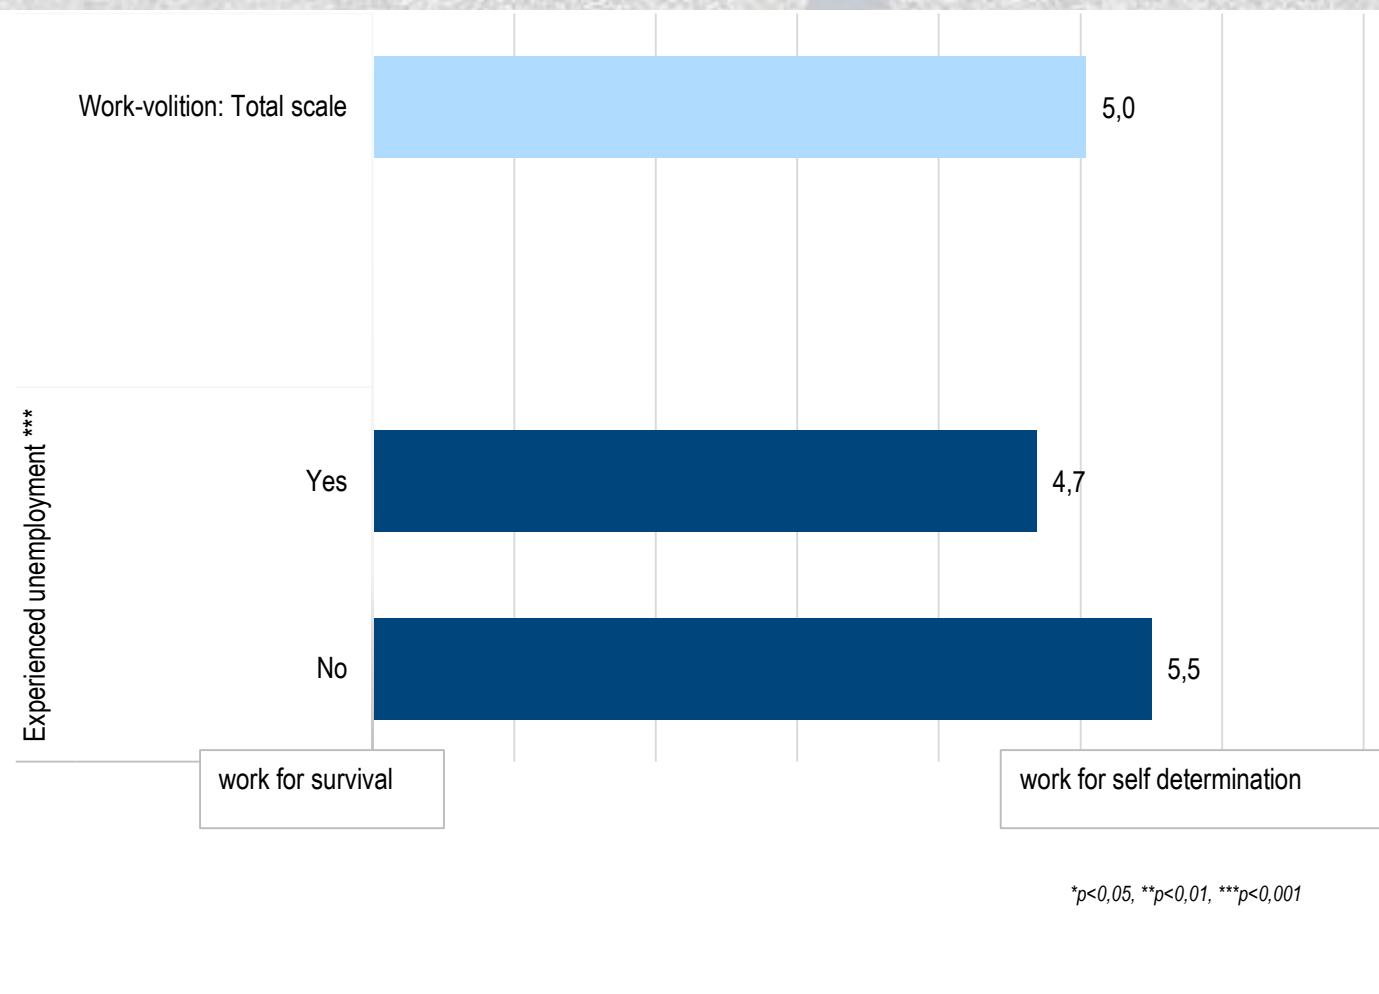

# Have you ever experienced being unemployed?

**Average in age group 16 to 24: 6,7% unemployment in 2019**

**Iceland: 3.4% unemployment in 2019**

# Work-volition and unemployment

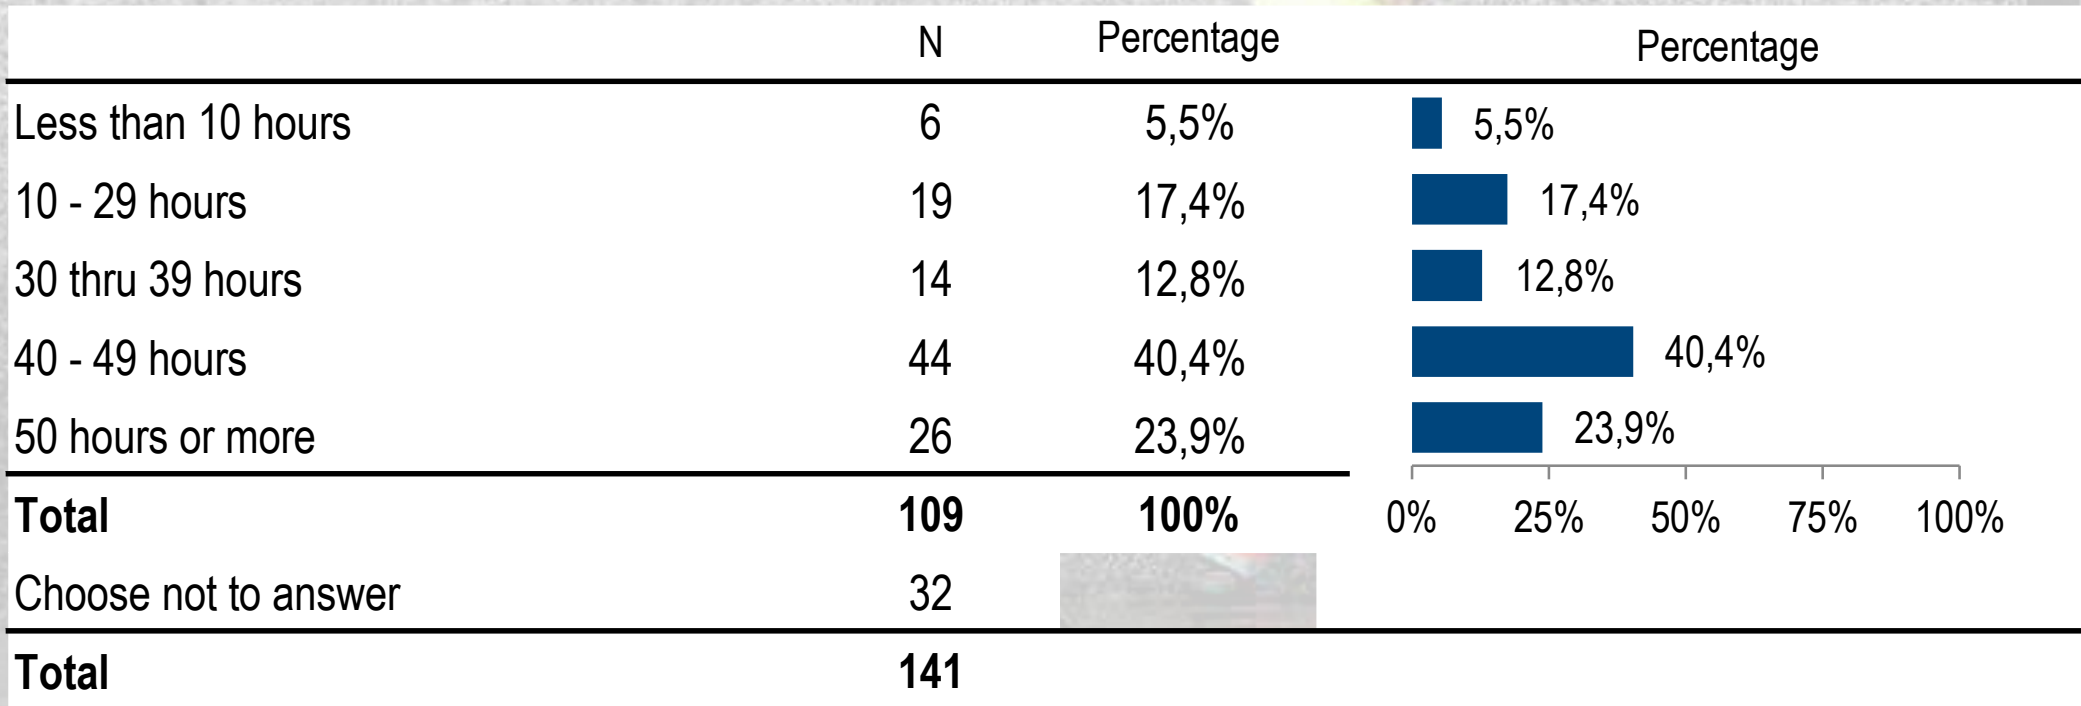

# Current work

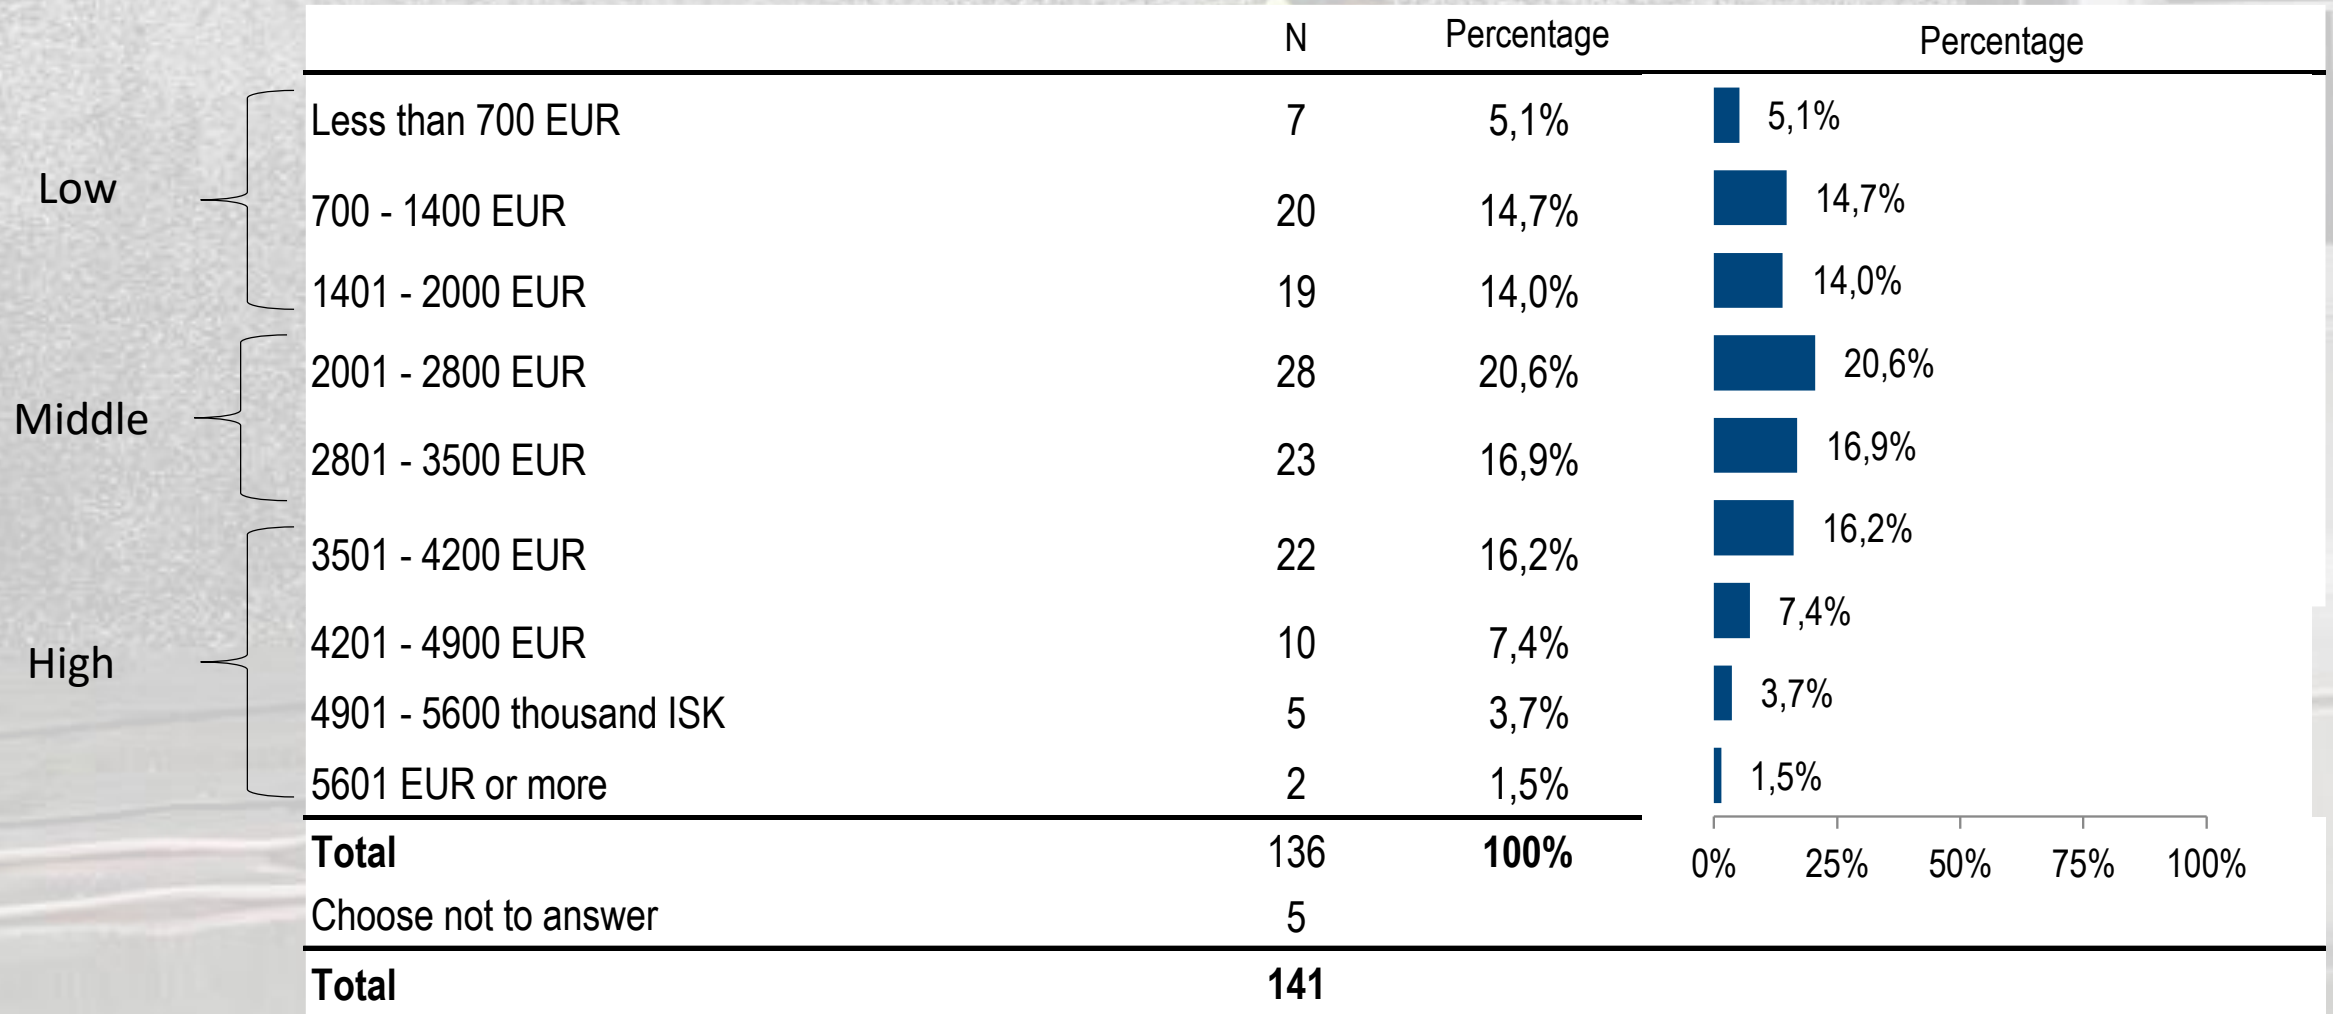

# Average number of work hours a week

Approximately how many hours do you work on average in a typical work-week, overtime included?

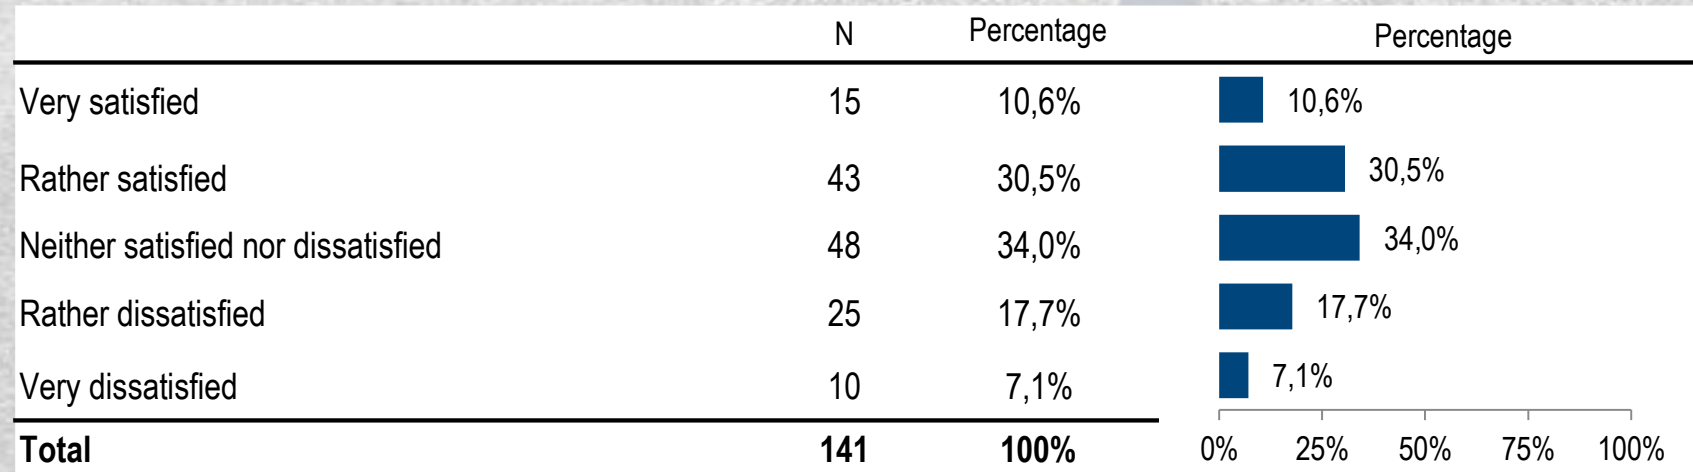

# Income

# Income satisfaction

To what extent are you satisfied or dissatisfied with your income?

Income satisfaction is associated with income and having children

\* $p < 0,05$ , \*\* $p < 0,01$ , \*\*\* $p < 0,001$

# Views on current work

	N	Agree	Neutral	Disagree
<b>To what extent do you agree or disagree with the following statements</b>				
I enjoy myself at work	141	89%	3%	8%
At my workplace there is good morale	140	84%	4%	12%
I feel good in the company of my coworkers	140	92%	2%	6%
I have good employment security at my workplace	141	80%	7%	13%
At my workplace people are rewarded if they do well	141	64%	16%	21%
Managers are concerned with the health and well-being of the employees	140	75%	9%	17%
Employees are treated equally and do not face discrimination	141	79%	10%	11%
At my workplace, people use their right to sick leave without fear or repercussions	140	79%	10%	11%
At my workplace, people in my position are encouraged to use their right to parental leave	141	66%	32%	2%
One the whole, I am satisfied with my work	141	89%	4%	7%

# Does the work qualify as decent work?

	N	Agree	Neutral	Disagree
<b>To what extent do you agree or disagree with the following statements</b>				
I feel emotionally safe interacting with people at work	141	85%	6%	9%
At work, I feel safe from emotional or verbal abuse of any kind	136	89%	1%	10%
I feel physically safe interacting with people at work	136	96%	1%	2%
I am not properly paid for my work	137	57%	14%	29%
I do not feel I am paid enough based on my qualifications and experience	136	43%	27%	31%
I am rewarded adequately for my work	137	62%	19%	20%
I do not have enough time for non-work activities	136	47%	8%	45%
I have no time to rest during the work week	136	33%	9%	58%
I have free time during the work week	136	67%	13%	21%
The values of my organization match my family values	134	36%	43%	21%
The values of my organization match the values within my community	136	39%	41%	20%

# In your opinion, are you likely or unlikely to hold your dream job in the future?

The likelihood of holding the job in the future is associated with type of preferred job but not participants' studies

# Preferred future occupation

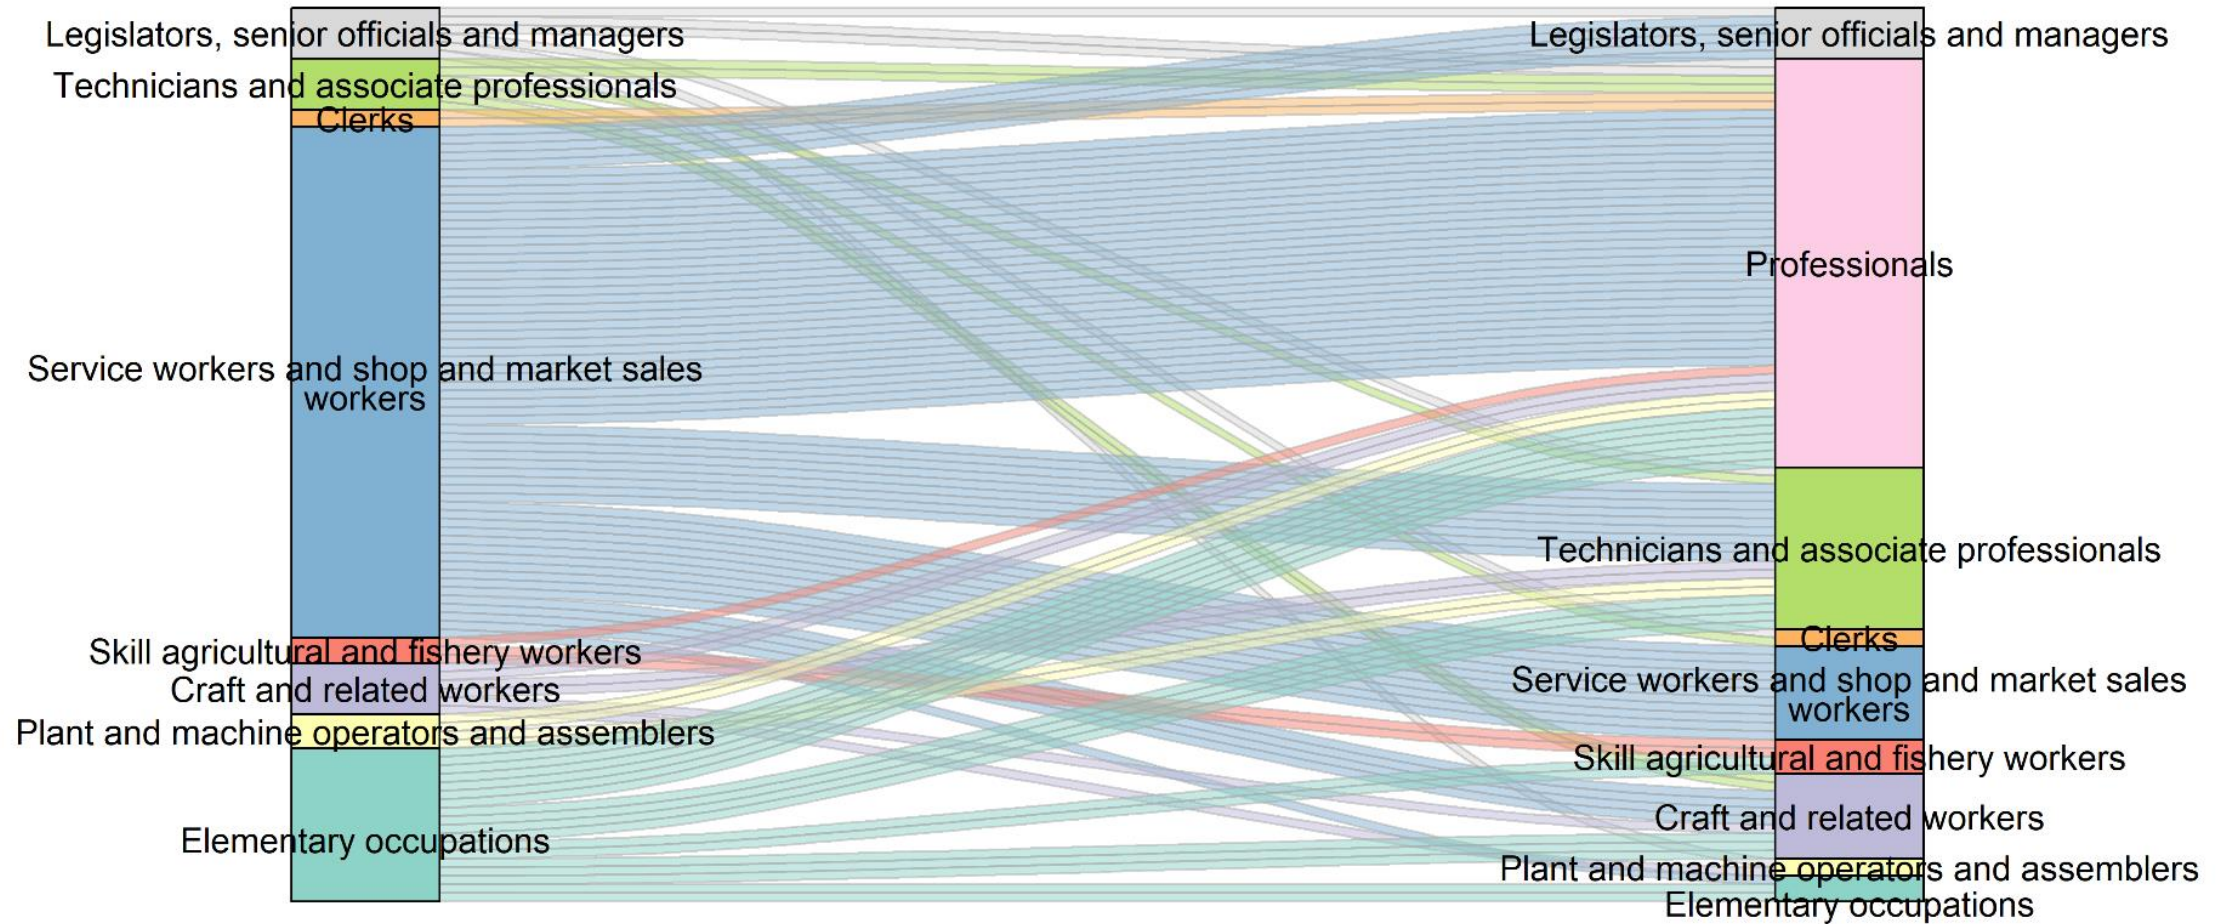

# Preferred future job in relation to participant's current occupation

Current occupation

Preferred future occupation

# To what extent do you agree or disagree with the following statements about the job you wish to hold in the future?

	N	Agree	Neutral	Disagree
<b>To what extent do you agree or disagree with the following statements</b>				
The job is secure	136	74%	10%	17%
The job provides high income	136	75%	12%	13%
The job offers high opportunities for advancement	136	78%	17%	5%
The job is interesting	137	97%	2%	1%
The job allows me to work independently	136	77%	13%	10%
In the job I can help other people	137	74%	18%	7%
The job is useful to society	137	84%	12%	4%
The job allows me to have personal contact with other people	137	91%	7%	2%
The job allows for a lot of spare time	136	51%	31%	18%
The job is respectful	136	85%	9%	7%
The job requires responsibility	136	88%	10%	2%
The job is intellectually stimulating	134	87%	11%	2%
The job gives me opportunity for creative expression	136	78%	15%	7%
The job gives me a chance to be outdoors	137	57%	16%	27%

Qualitative St

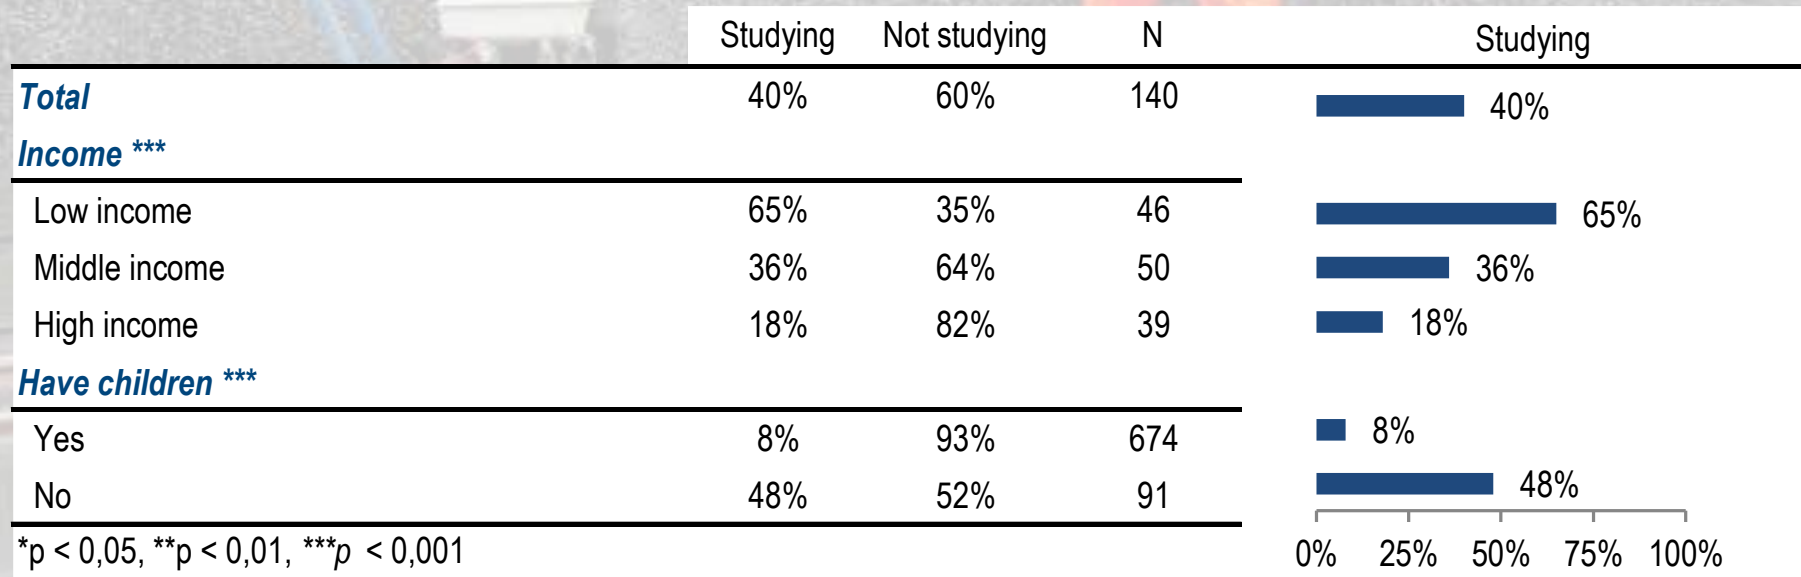

Context!

# Are you currently studying in secondary school?

## Studying in secondary school was associated with income and having children

\*p < 0,05, \*\*p < 0,01, \*\*\*p < 0,001

# Those who are in secondary school: In your opinion, are you likely or unlikely to complete the studies

# Those who are not in secondary school: Are you planning on starting secondary school?

	N	Percentage	Percentage
Yes, academic studies	35	43,8%	 43,8%
Yes, performing or visual arts	3	3,8%	 3,8%
Yes, occupational studies/training	20	25,0%	 25,0%
No	22	27,5%	 27,5%
<b>Total</b>	80	<b>100%</b>	0% 25% 50% 75% 100%
Do not want to answer	4		
Not applicable	57		
<b>Total</b>	<b>141</b>		

# What are the main reasons for not completing studies at upper secondary school?

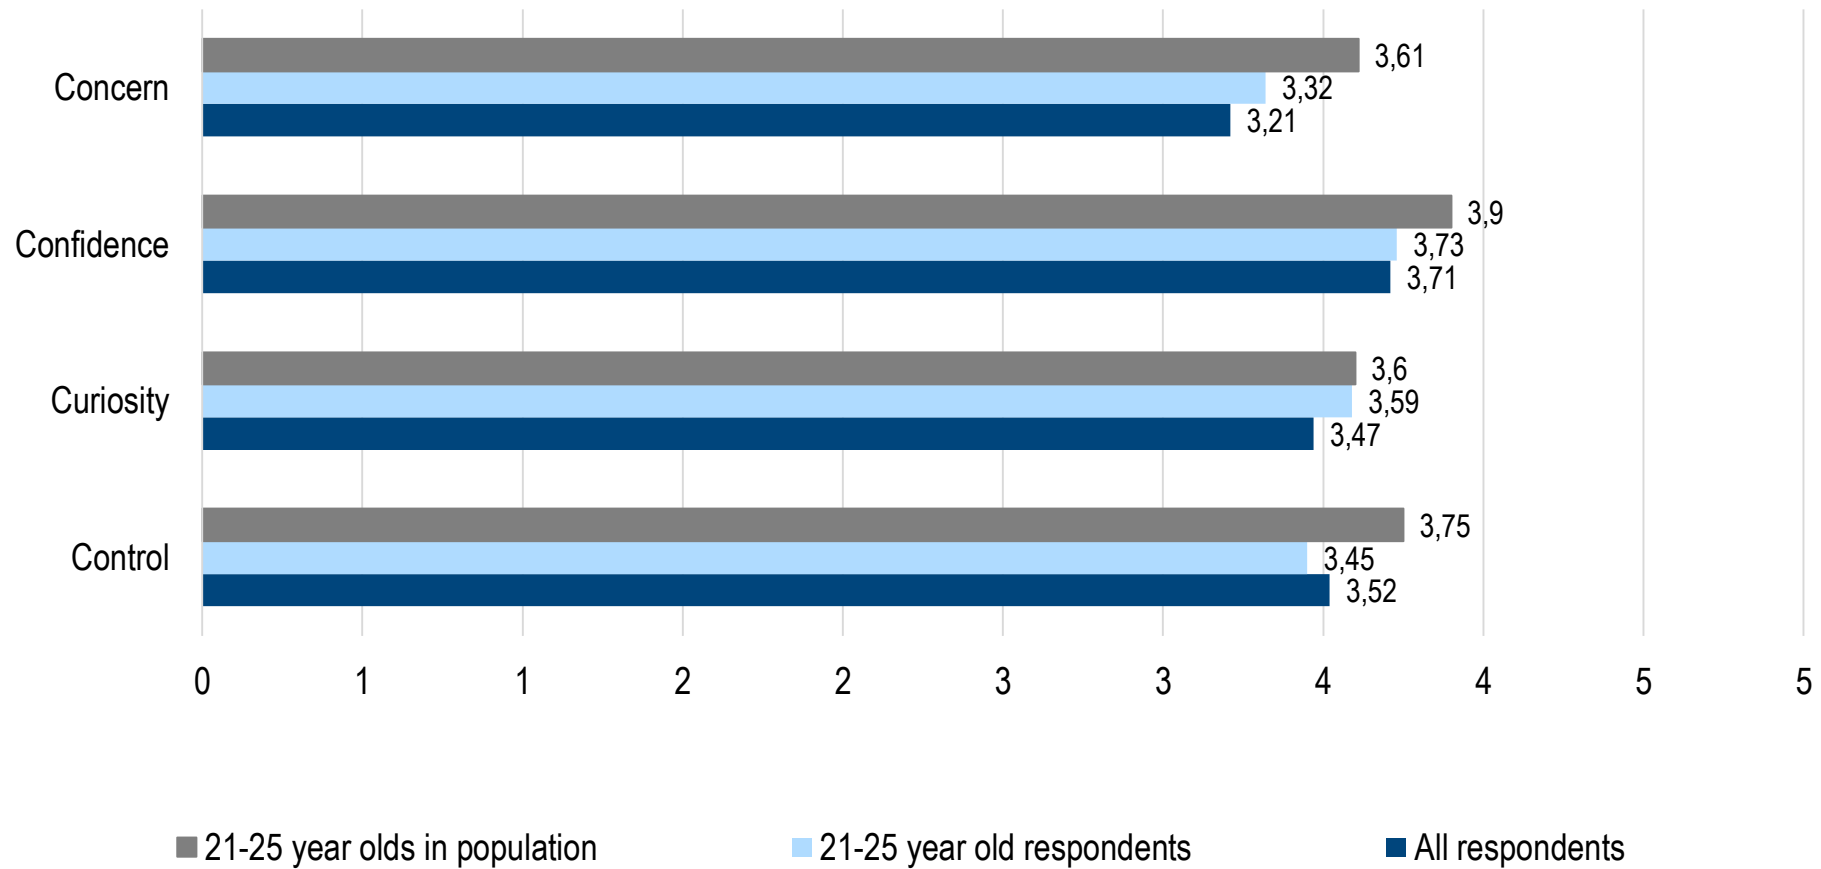

N=107

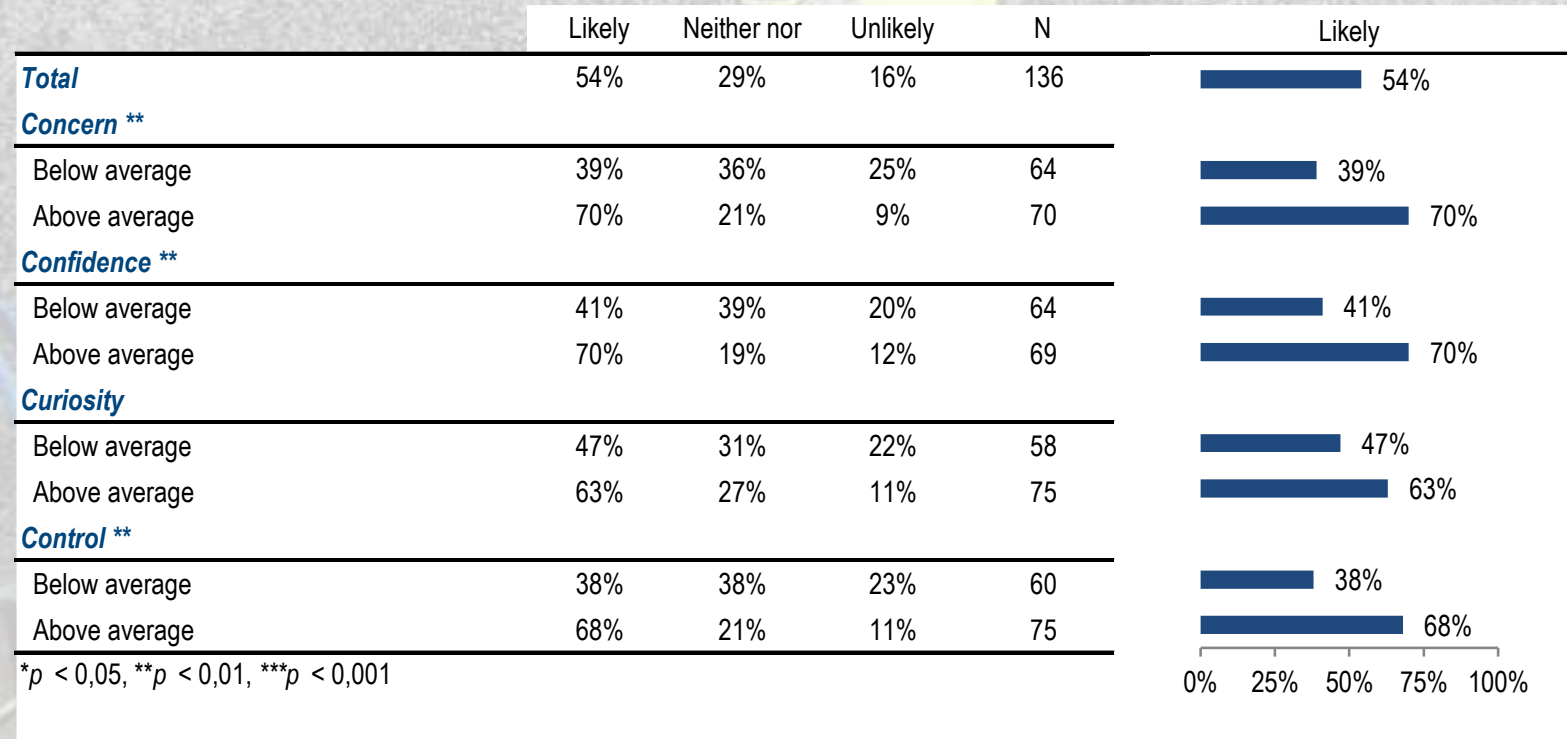

Participants could mark more than one answer, therefore the total percent of cases is larger than 100%.

# Career Adapt-Ability Scale

# Career adaptability and likelihood of holding preferred job in the future

# Summary and discussion 1 of 3

- Positive occupational outlook: 55% of participants think it likely or rather likely that they will enter their preferred occupation (16% unlikely)
- Positive educational outlook: Of the 40% who are in school 2/3rd find it likely they will finish their studies. Will they with all the work they are doing (64% work over 40 hrs a week)?
- Causes of dropout show that this group has had more difficulties than dropouts as a whole (more learning difficulties, mental illness, lack of interest...)
  - 60% are not in school (2/3rd would like to return) – What support do they have?
- What about support like student loans or educational organisations (for adults)?
- Most valued aspect of their preferred occupation: interesting and allows personal contacts
- Most participants feel good at work and find other aspects of it more or less decent

# Summary and discussion 2 of 3

- 20% are parents (45% in population). They are much less happy with their salary and less likely to be in school → poor family policy
- Participants who have been unemployed score lower on work volition
  - Survival vs self-determination is clearly a dimension (Blustein)
- Career construction
  - Participants score lower on all scales of career adaptability compared to peers
  - They are especially not as concerned (plan and prepare) or in control (decisive) → need more support → difficulty in career identity construction?
  - Participants who find it likely they will reach their career goals score higher on CAAS
- Are we looking at one or more groups (hopeful vs not hopeful)? Or a fluid work situation (non linear career)?
- Analysis of data with social variables of gender, SES → intersectionality

# Summary and discussion 3 of 3

- Guidance for all, not only for people in school → 10 year plan in Switzerland

Takk fyrir – Thank you - **Merci**
